

**Parramatta Light Rail is one of the NSW Government's major public transport projects, part of a record \$89.7 billion infrastructure investment across the state.**

Stage 1 of Parramatta Light Rail will connect Westmead to Carlingford via the Parramatta CBD and Camellia.

In preparation for construction to start in 2020, project Infrastructure Works Contractors CPB Contractors and Downer Joint Venture will be undertaking geotechnical activities and underground services exploration along the Stage 1 corridor from Westmead to Carlingford.

## Investigation Works

Investigation works from 22 March 2019 will involve:

- digging holes in the road using saw cutting, jackhammering and excavating for underground utility investigation (high levels of noise)
- drilling for soil sampling for geotechnical testing
- investigating identified heritage and archaeological sites
- reinstating footpath and road surfaces for safe access.

## What to Expect

Our project contractors will be in contact directly with business and residents adjacent during February to ensure potential locations and durations of works are understood, including night work impacts.

## Hours of Work

Investigations will occur across the Stage 1 route (see [www.parramattalightrail.nsw.gov.au/maps](http://www.parramattalightrail.nsw.gov.au/maps)) Monday to Sunday, including out-of-hours activities to avoid unnecessary disruptions to businesses, parking and traffic, particularly those in Eat Street and Macquarie Street, Parramatta.

## Traffic, Parking and Pedestrian Management

There may be a need to close one lane of traffic for a short period to enable the investigations. Street parking may also be temporarily unavailable as work progresses. Traffic control will be in place to enable pedestrians and vehicles to move safely around work areas and ensure access to driveways is maintained. Please follow directions and proceed carefully.

## Noise Management

The proposed activities will have varying levels of noise associated with them and we will make every effort to minimise impacts through:

- monitoring and reviewing noise
- consulting directly with affected residents and businesses
- using non-tonal reversing beepers on machinery
- turning off equipment and vehicles when not in use
- directing noise emissions away from residential properties, where possible
- providing respite periods for residents most affected by noise
- completing noisiest activities during less sensitive times, where practicable.
